

FOSTAC OMNI CHIP

The **FOSTAC OMNI CHIP** harmonizes electrosmog, i.e. the harmful radiation (including 5G radiation) from mobile devices such as mobile phones, smart phones, smartpads, tablets etc.

It is specially designed for wireless communicating devices that communicate with the latest technologies. Of course, it can also be used for all older mobile devices.

The FOSTAC OMNI CHIP is already the 4th generation of the world's first cell phone chip.

Application: Simply stick it into the housing of the device or between the protective cover and the device.

The *International Society for Electromog Research (IGEF)* certifies that the FOSTAC OMNI CHIP has a verifiable improvement in

heart rate variability in the case of health exposure to mobile communications and electrosmog. It is suitable as a protective device in cases of electromagnetic radiation exposure.

TECHNICAL DETAILS

Material: Carbon fiber sheet

Size: 36 x 36 mm
